

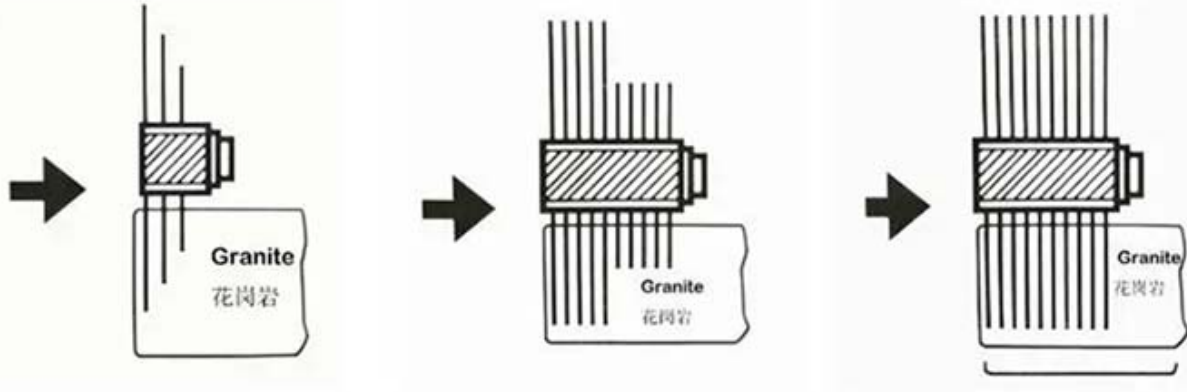

Figure 1: Comparison of single size and multi size block cutters

The single size block cutter is used for cutting granite blocks of a single size. The multi size block cutter is used for cutting granite blocks of multiple sizes. The multi size block cutter is more flexible and can be used for cutting granite blocks of different sizes and shapes. The single size block cutter is more rigid and can only cut granite blocks of a specific size and shape.

Multi blade block cutter (Single Size)

Mu lit blade block cutter (Multi Sizes)

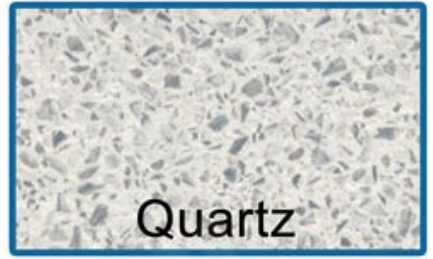

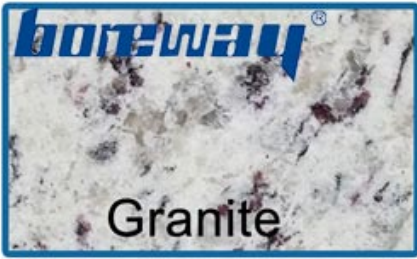

Figure 2:

The multi size block cutter is used for cutting granite blocks of multiple sizes. The single size block cutter is used for cutting granite blocks of a single size.

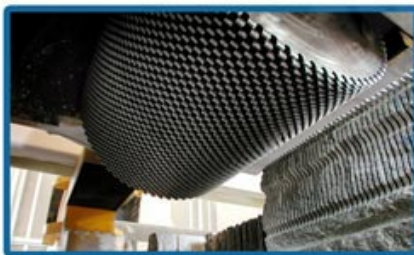

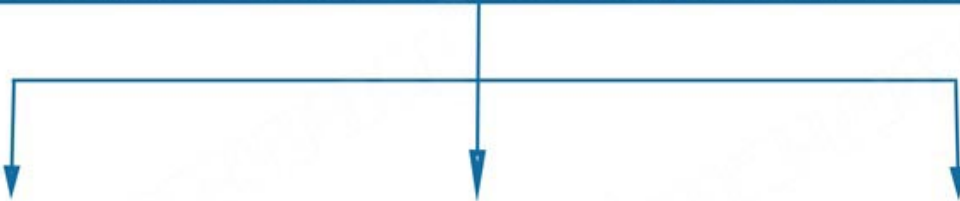

For Block Cutting of Granite, Sandstone, Slate, Kinds of Hard Stone with quartz

One is single size multi cutter, which all blade sizes in same thickness and diameter while the other is multi size multi cutter, two sizes or more different size diameter blades used together in one stone machine.
