

Introduction:

Diamond concave saw blades also named diamond convex saw blades are used on angle grinders or other small cutting machines for cutting circles or curved line on the stone slabs and countertops. The protection teeth provide faster cutting on kinds of hard stones. Hot sintered and cold pressed concave saw blades are both available.

Features:

1. Dry and wet use are both available.
2. Unique design of protection segments provide faster cutting and longer lifespan.
3. High cutting efficiency and stable performance.

Specifications:

The followings are the normal specifications of our diamond concave saw blades:

Product Name	Outer Diameter		Segment Type	Segment Height	Arbor	Applications
Diamond Concave Saw Blade	4"	105mm	T Segmented Turbo Segment Continuous Rim	8mm	22.23mm	Masonry Ceramic Concrete etc.
	5"	125mm		8mm	25.4mm	
	6"	150mm		8mm		
	7"	180mm		8mm		

The above specifications are for reference, other specifications can be ordered by customers.
