

Introduction:

Hardness metal abrasive fickerts are designed for high performance machines of granite and machines with a head.

The hardness metal abrasive fickerts are sintered at high temperature.

Used to processing all kinds of hard materials such as marble, granite, terrazzo, etc and improve the precision,

especially suitable for full-automatic production line of granite polishing, good sharpness, strong cutting ability, durable and cost-effective.

Used on automatic and semi-automatic polishing machines.

Hardness metal abrasive fickerts with plastic base can be used in single head or multi-head of producing line

of polishing machine.

Mainly for polishing ceramic.

The diamond fickert includes the metal bond fickert and aluminum bond fickert.

Feature:

1. Good polishing efficiency.
2. Long using life.
3. The highest quality.

Specifications:

The are the normal specification of the hardness metal abrasive fickerts

Length	Height	Water Quantity Needed	Grit No.	Water Groove

130mm	15mm	Big	#35/40, #50, #60, #70 #80, #100, #120, #140 #170, #200, #230	Without
140mm	16mm			With or Without
170mm	20mm			With or Without

The above specification just a reference for clients. Other specification can be ordered by customers.
