

Introduction:

The BWM-

DT01 titanium coating machine is designed for electroplating titanium on diamond powder. The diamond powder can be more durable and sharp after titanium electroplated.

Features:

1. Large volume, high-power. Capacity of processing can be as much as 40,000 ct for once, reduce labor intensity.
2. PCL intelligent control system, temperature control can be more precise.
3. Stainless steel shell, more beautiful and durable.
4. Easily operation, low failure rate.
5. Filtration system, maximized the life of the vacuum system.

Specifications:

The followings are the normal specifications of our titanium coating machine for diamond powder:

Parameters	Numerical
Type	BWM-DT01
Power	6 KW
Dimension	1900mm * 1100mm * 550mm
Power supply voltage	380V, 50/60Hz, 3phases
Weight	190 KG
Maximum volume	3.6 L

The above specifications are for reference, other or special specifications can be ordered by customers.
